SECTION 4. FIRST AID MEASURES

4.1. Description of first aid measures

General measures

Remove affected person from the contaminated area to fresh air or well-ventilated area, providing her basic life functions and protect it from the cold or heat. Never give fluids or provoke vomiting if the victim is unconscious. Call the doctor and give him the information on the packaging and/or on the instructions for use of the preparation. **ADVICE FOR DOCTORS:** Difenacoum is an anticoagulant which may produce bleeding; this may be delayed for several days after exposure. If there is no active bleeding the INR (prothrombin time) should be measured on presentation and 48-72 h. after exposure. Indicated use of specific antidot of vitamin K1 (phytomenadionum) in case of bleeding or reduced activity of protrombine is in measure of 10-20mg (children 5-10mg) slowly i.v. or in infusion. Vitamin K1 (phytomenadionum) can be given about 6Xdaily in measure of 10 mg i.v. according to clinical picture, by the worst poisoning about 125 mg/daily. Vitamin K3 (menandion) is not effective! Because of danger of haematoma avoid intramuscular injection. At worse bleeding the following is needed: transfusion with blood and additional replacement of coagulational factors in shape of frozen plasma or protrombine complex. If necessary give special antidot even more weeks or months.

Inhalation

Comply with general measures.

Skin contact

Take off all contaminated clothing. Wash thoroughly with plenty of water and soap! If feeling unwell seek medical help.

Eye contact

Immediately flush eyes with running water, keeping eyelids open. Check for and remove any contact lenses. If irritation persists, seek professional medical attention.

Ingestion

Do not induce vomiting. Rinse mouth with water. Immediately consult a specialist. Show the physician the Safety Data Sheet or label.

4.2. Most important symptoms and effects, both acute and delayed

Inhalation

-

Skin contact

Contact with skin may cause irritation.

Eye contact

It can cause shortterm irritation.

Ingestion

Difenacoum is an anticoagulant which may produce bleeding; this may be delayed for several days after exposure.

In case of poisoning bleeding disorders and increased bleeding tendency may occur.

In severe poisoning a strong internal bleeding can cause circulatory collapse and consequent death.

4.3. Indication of any immediate medical attention and special treatment needed

Difenacoum is an anticoagulant which may produce bleeding; this may be delayed for several days after exposure. Antidote: Vitamin K1.

SECTION 5. FIREFIGHTING MEASURES
